

OPX Team Scheduling

Transform your digital operations with OPX

opx

Overview

The OPX Team Scheduling module is designed to help bring the skills of front-office capacity planners and traditional team schedules to the back-office.

Similar to front-office scheduling systems but focused on the back-office, it allows planners, workforce managers and team leaders to:

- define unlimited shifts
- define unlimited rotas
- define repeating rotas which are very common in the back-office
- record site and company holidays
- define individual holidays
- define break times, meetings and training times
- check schedule adherence
- assign team members to the rotas in order to get planned rotas

Benefits

Bringing the benefit of a human capacity plan to enhance the accuracy of the capacity planning in a near-term timeframe, OPX Team Scheduling can bring fine control to expected attendance and actual delivery, helping to improve future statistics for ASH (Absence, Sickness, Holidays) in plans.

Improve

Planning teams can use this insight in conjunction with granular skills and team process responsibilities to help manage and improve on potential impacts of skills-based shortages against planned demand. Get it today and see an accurate capacity for teams, processes and activities.¹

¹ Usually requires some customisation and tailoring to fit your reporting needs in the OPX Reports module.

To find out more about how OPX can help you transform your organisation, please contact Alex Allan, CEO.
